

## SPOT Hosted Email Encryption

Send sensitive information via email securely via SPOT Hosted Email Encryption.

**Email Archiving**

### SPOT Hosted Email Encryption powered by Intermedia

**SPOT Hosted Email Encryption** allows you to send emails with end-to-end encryption – so important documents and information such as contracts, company plans, and other sensitive information can be safely and securely sent via email.

### Why encrypt email?

Email is a convenient, fast and efficient way to communicate and share important information. However, it is an inherently insecure medium, as emails travels through multiple public and private networks and data lines between sender and recipient. Because email by default is sent in a unencrypted format, anyone who can intercept the email in transit, can easily access of its contents, including any attachments.

By encrypting email with **SPOT Hosted Email Encryption**, only the sender and recipients, who have a special decryption key, can read the contents of the message and its

attachments. If someone intercepts an SPOT Hosted Email Encryption, or tries to access it without permission and the decryption key, they will be unable to read the email or its attachment.

## Who Should Encrypt email?

All businesses, and their professional advisors, agents and clients should take steps to protect the privacy of their email. Businesses that need encrypted email include:

**Financial Services** – Banks, brokerages, insurance companies, wealth management, accountants, financial advisors

**Healthcare** – Physicians, clinics, health associations, health networks, hospitals, pharmacists, pharmaceutical companies

**Business Professionals** – Lawyers, headhunters, investigators, consultants, human resource professionals

**Local/State Government** – Finance directors, town/city managers, town/city council, town/city staff

Businesses need to be able to trust email communications and reduce the risk of damage to their brand. Professional advisors such as lawyers, financial advisors, accountants, educators, and healthcare providers, all have ethical and fiduciary duties to keep their clients' personal information confidential.

## Regulatory Compliance controls risk and maximizes security

Governments have enacted legislative measures to protect the privacy and reliability of business and personal information. **SPOT Hosted Email Encryption** meets these industry-specific privacy legislations including:

**Health Insurance Portability and Accountability Act (HIPAA)** is an example of legislation that protects personal information sent amongst health care professionals, such as patient health records, test results, x-rays, and prescriptions, are used, disclosed, and protected.

**Sarbanes-Oxley Act (SOX)** governs integrity of financial operations of publicly traded companies with the primary goal of protecting “investors by improving the accuracy and reliability of corporate disclosures made pursuant to securities laws”.

## Fully managed email encryption solution

When you sign up for **SPOT Hosted Exchange Email**, it's easy to add **SPOT Hosted Email Encryption**. With **SPOT Hosted Email Encryption**, users can quickly, easily and intuitively send email with confidence. **SPOT Hosted Email Encryption** is built on industry-trusted encryption standards, and provides the tools you need to simply and easily administer users.

## How does it work?

The **SPOT Hosted Email Encryption** solution includes a small desktop plug-in that works with Microsoft Outlook. Users compose their email messages, add any attachments, click the "Secure" button on the SPOT Hosted Email Encryption plug-in toolbar, set their encryption password, and hit "send." It's that easy. When the recipients receive the message, they will be prompted for the password, which will decrypt the message. This simple process allows users to quickly encrypt and decrypt messages without the hassle of managing a security and key infrastructure.

## How Secure is it?

**SPOT Hosted Email Encryption** uses standards-based technologies such as Public Key Infrastructure (PKI), S/MIME and X.509 certificates to enable the parties in a dialogue to establish confidentiality, message integrity and user authentication. This ensures the best commercially available encryption security for your messages.

## What attachments does it support?

**SPOT Hosted Email Encryption** can encrypt any MS Office document, .PDF file, image files, and almost any other popular file format.

## How much does it cost?

SPOT Hosted Email Encryption solution can be purchased on a per user basis. The solution is available for \$10 per user per month, with a one-time \$25 set up fee per user.
