SPOT Network Monitoring
Making IT Easier

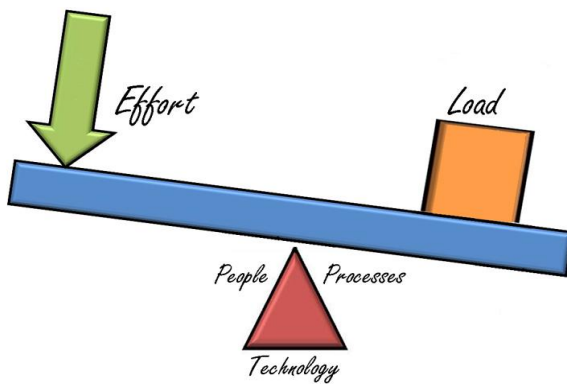

THE **FULCRUM** GROUP
One Technology Solution: Yours

SPOT Network Monitoring is a comprehensive cloud-based network monitoring solution that provides immediate alerting, asset reporting, and other real-time information on your network.

As “your network watchdog” we monitor your network 24x7, alerting you when there are issues, so you can stay focused on doing what you do best – running your business.

The Fulcrum Group is your partner in both affordable small/medium business IT support and the long-term success of your business.

**PEOPLE + PROCESSES + TECHNOLOGY
= THE FULCRUM GROUP DIFFERENCE**

Our SPOT Network Monitoring Service includes:

- In-depth monitoring of Windows servers, PCs, and laptops, as well as network devices like network printers, switches, firewalls, and more.
- Agentless architecture - No agents have to be installed on devices attached to your network. Monitoring of remote devices is provided over a site to site VPN. Optional agent offered for remote and traveling laptops.
- Comprehensive Asset Management – includes discovery of network-attached devices, hardware and software inventory and warranty information.
- Remote Control and Remote Management – our help desk or field engineers can remote into any computer or server, without requiring VPN connectivity. Remote Assistance sessions can also be initiated.
- Patch Management - Monitor and implement Windows patch management directly from within the SPOT Network Monitoring web admin interface.
- 24/7 Monitoring, Reporting and Trending – you'll be aware of little issues before they become big ones, and always be informed about any computer or device on your network
