

**SPOT**  
Shield Managed IT Security Services

## ***SPOT Shield IT Security Assessment Services***

Recent studies show that 43% of attacks target SMBs. The average cost of an attack is rising, and the time it takes to recover is increasing as well. ***Do you know how well your IT security posture is protecting your business?***

SPOT Shield IT Security Assessment Services can assess and report on your IT security posture. The resulting Executive Summary and other deliverables will provide you with a roadmap of your current IT security posture, and an action plan on how to improve it.

Task	Purpose	Silver	Gold	Platinum
Executive Summary Review	Provide a high-level overview of the report for executives, along with a list of the most important discoveries from the assessment, with a recommended action plan for each discovery.	✓	✓	✓
Evaluate inbound firewall configuration	These reports will form the basis of checking for vulnerabilities in the firewall. If a managed firewall service is not in place, it justifies the need to implement one. It also ensures that changes made to the external firewall or exposure of outward-facing applications is minimized.	✓	✓	✓
Evaluate outbound firewall configuration	The SANS Institute best practices for egress filtering points to the vital role the blocking of unnecessary traffic plays in eliminating the spread of viruses, worms, and Trojans in the environment.	✓	✓	✓
Evaluate current patch management	Looks for systems in which security patches have not been applied in a timely manner	✓	✓	✓
Evaluate anti-virus and anti-spyware	Determines where anti-virus and anti-spyware is not deployed or is out of date	✓	✓	✓
Administrator review	Validates, through interview with business owner, the list of users with administrative privileges	✓	✓	✓
Share permission review	Validates which users have access to critical business data through interview with the business owner	✓	✓	✓
Physical security walk-through	Provides an in-person walk-through of the office and gathering of the results using our site walk-through questionnaire	✓	✓	✓
Internal Vulnerability Scan	Scans for internal vulnerabilities within the client's network to find security flaws that could be exploited once an attacker makes it inside the network		✓	✓
Anomalous login detection	Reviews security audit logs looking for suspicious logins		✓	✓
Security Policy Assessment	Reviews default Group Policy and applicable Local Security Policies for consistency and alignment with best practices		✓	✓
IT Administrator Review	Reviews user, computers, and Layer 2/3 detail with the in-house administrator to identify possible defunct or rogue users and systems		✓	✓
