

# PEOPLE ○ PROCESSES ○ TECHNOLOGY

## A Cybersecurity Framework

A stellar framework for establishing a comprehensive cybersecurity plan includes 3 components: People, Processes, and Technology. Let's break that down...

1

### PEOPLE

Bring awareness and training to employees.

Experts recommend the following considerations:

Build a security consciousness among employees and cross-train them.

Get IT experts when you need them - hire a Fractional CIO.

See more here.

2

### PROCESSES

Implement robust policies, processes and procedures.

Stay in control of your cybersecurity. Experts recommend the following:

Have an acceptable use policy and limit employee access to sensitive data.

Put someone in charge of log-checking and create a playbook for different scenarios.

See more here.

3

### TECHNOLOGY

Make smart technology choices.

CEOs have varied options, including:

Antivirus software and firewalls

Data backup solutions

Encryption

Multi-factor authentication
