

Did you know your email signature could be a security weak point?

90%

of people use a single email signature for business.

Your email signature could be a goldmine of info for cyber criminals.

They typically include a combination of:

Your name & Job title

Phone Number

Email Address

Website

Social Media Accounts

- Cyber criminals can use this information to pretend to be you.
- Then trick other people into handing over sensitive info. Or money.
- Spoofing email signatures is a common tactic used to scam businesses.
- You and your team could be tricked in the same way.

Stay protected by:

1

Including only basic info

2

Creating a standard signature for everyone

3

Teaching your team the risks

4

Implementing encryption

5

Monitoring for suspicious activity
